Art Unit: 3751

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 2, 4, 7, 8, 9 and 22 are rejected under 35 U.S.C. 102(a) as being anticipated by Sturman ('685).

In particular, valve (44) controls high-pressure flow to actuators 12, 14 and 16 all of which are engine valves. Valve (44) is open to either high-pressure rail (46) or low-pressure rail (48).

The existence of a device control passage in the valve would be inherent (and the high pressure and low pressure passages).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sturman in view of Miller.

Sturman applies as noted above and Miller ('968) teaches that it is known to use a pilot spill valve to control an engine-braking valve. Since Sturman is also controlling such a valve, the Miller valve would have been obvious to use in Sturman.

Art Unit: 3751

Claims 6, 10-14 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 17-21 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Applicant's arguments filed January 31, 2005 have been fully considered but they are not persuasive.

In particular, applicant has amended his claims to require that a single valve control the flow of fluid to both actuators. Sturman clearly shows this idea but does not show at least one of the actuators as an injector. Thus, many of applicant's claims have now been allowed or indicated as containing allowable subject matter. The remaining arguments made by applicant are now moot due to the application of a new reference against the claims.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory

Art Unit: 3751

period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
